We have recently heard from frontline medical physicians that the current global health crisis is something they have not been trained to deal with nor do they fully understand the spectrum of symptoms they encounter in hospitals and emergency centres. Earlier this week, Dr. Cameron Kyle-Sidell, an emergency physician affiliated with Maimonides Medical Center (Brooklyn), posted two insightful videos urging health practitioners to accept that COVID-19 does not cause any form of pneumonia. Instead, the virus causes a condition of oxygen deprivation, and ventilators as they are currently being used, may cause more harm than good for some patients.

What Dr. Kyle-Sidell suggests is a paradigm change in the perception of the current endemic. Kyle-Sidell is not alone, the few doctors who allow themselves to discuss the situation in a critical manner admit that medical science is perplexed by the virus.

One would assume that if the virus at the centre of the current epidemic was an unsavoury present from 'mother nature' we would be able to trace its evolution. We likely would have seen the gradual appearance of some of the new symptoms that have caught our medical establishment unprepared. It doesn't seem this happened. In the view of many medical practitioners the new disease is in a category of its own. It is a novelty.

This means that it is possible that the Corona virus wasn't created by nature but by creatures who believe themselves to be greater than nature.

In light of the above, I offer my paradigm change, one that is probably more radical than what Dr. Kyle-Sidell may have had in mind.

Since we do not know its provenance, we should treat the current epidemic as a potentially criminal act as well as a medical event. We must begin the search for the perpetrators who may be at the centre of this possible crime of global genocidal proportions.

While medical diagnosis is defined by:

1. a determination of the nature of the cause of a disease.
2. a concise technical description of the cause, nature, and/or manifestations of the symptoms.

Criminal investigations are primarily engaged with the human element. The criminal investigator seeks to ascertain the methods, motives, and identities of criminals, the identity of victims and may also search for and interrogate witnesses to the crime.

Treating the Corona virus as a crime would mean searching for possible offenders: individuals, institutions, or states that may have created the lethal virus as part of a research program or more directly, as an agent of biological warfare.

Law enforcement agencies often allocate dozens of investigators, officers, detectives and agents to untangle a single homicide. One would expect that following the deaths of tens of thousands around the globe, every police force, government and intelligence agency would join forces in the attempt to identify the possible culprit(s) at the root of the coronavirus crisis. We may be dealing with a negligent or criminal event on a massive scale.

While scientists and medical experts find it difficult to explain exactly how Covid-19 operates or how it came about, a few critical voices within the scientific community and the dissident media have pointed to alternative explanations that seem more explanatory than anything conventional medical thought has so far offered.

Some claim that G5 radiation is at the core of the new epidemic. I do not have any intention nor am in any position to comment on the topic, however, considering the scale of death we are dealing with, a criminal investigation may have to look closely into such a possibility: identifying the danger, identifying the possible motive and spotting the financial benefactors as well as beneficiaries.

A number of scientists have commented that laboratories and research centres have been engaged in the study of corona viruses and experimented with models that resemble the current virus. Specifically, some have pointed to a North Carolina laboratory that experimented with the viruses extracted from bats in 2015.

Back in 2015 USA Today published extensive research relating to the ongoing safety issues in biological laboratories in America and elsewhere. "Vials of bioterror bacteria have gone missing. Lab mice infected with deadly viruses have escaped, and wild rodents have been found making nests with research waste. Cattle infected in a university's vaccine experiments were repeatedly sent to slaughter and their meat sold for human consumption. Gear meant to protect lab workers from lethal viruses such as Ebola and bird flu has failed, repeatedly." The American outlet revealed that "hundreds of lab mistakes, safety violations and near-miss incidents have occurred in biological laboratories coast to coast in recent years, putting scientists, their colleagues and sometimes even the public at risk." Naturally, safety failures in biological laboratories aren't just an American problem. "A small, deadly outbreak of severe acute respiratory syndrome in China in 2004 was traced to lab workers at the National Institute of Virology in Beijing. In 2007, an outbreak of foot and mouth disease among cattle in England that required herds to be slaughtered was blamed on leaking drainage pipes at a nearby research complex."

In 2014 the US National Institute of Health removed its funding of gain-of-function (GOF) experiments involving the influenza, SARS, and MERS viruses. Gain-of-function involves activating mutations to change the gene product to enhance its effect or so that its normal actions are superseded by a different and abnormal function. Apparently, the National Institute of Health's moratorium ended on Dec. 19, 2017 when the US announced that it would resume funding American gain-of-function experiments involving these viruses. This means that since 2017 some American laboratories have been experimenting with Corona viruses; creating mutants with the financial support of the government.

Treating the Corona virus outbreak as a crime ought to include a visit by the FBI to the office of the National Institute of Health and a careful review of all the files related to American laboratories conducting GOF experiments with Coronavirus. This investigative procedure must be exercised in every region and country in the world that has engaged in GOF experiments.

As soon as the Corona virus became the new disaster, Dany Shoham, a former Israeli military intelligence officer, was quick to point to China's biowarfare program as a possible originator of the virus.

By now, with the exception of President Trump and his Pompeo character, not many are convinced that Covid-19 is a Chinese Virus (as Trump refers to it when he wants to annoy progressives). A criminal investigation would have to examine Chinese as well as Russian, British, French, German, etc. laboratories and their safety records. It should also verify whether Dany Shoham had any evidence for his assertion regarding China or whether he was attempting to divert attention from another possible suspect in this Corona affair.

Israel, with its extensive biological warfare laboratories and WMD facilities must also be subject to thorough scrutiny.

During his first term as Israel's leader, Mr Netanyahu authorised a risky attempt to assassinate the Palestinian rising star and Hamas leader, Mr. Khaled Meshaal in the Jordanian capital, Amman. Five Mossad agents, posing as Canadian tourists, were sent to Amman. They ambushed Mr Meshaal on a street corner and sprayed poison into his left ear and expected him to die within 48 hours.

But their plan went wrong. One of Meshaal's bodyguards chased the two Mossad agents who had carried out the operation and, with the help of a passing Palestinian Liberation Army officer, managed to capture them.

Instead of escaping over the border as they had planned, the rest of the Mossad team was trapped in the Israeli embassy in Amman. Mr Netanyahu was left with no option other than to negotiate with King Hussein of Jordan and plead for his assassins' return. The king, who was dying of cancer, drove a hard bargain. Israel had to supply immediately the antidote to the poison that was killing Mr Meshaal. Netanyahu also

had to agree to release nine Jordanians and sixty-one Palestinian prisoners amongst them Sheikh Ahmed Yassin, the spiritual leader of Hamas and at the time, Israel's most hated foe.

But here is the astonishing piece of this saga. The poison used by Israel is a slow-acting but lethal poison that gradually shuts down the brain's respiratory centre, leading to death. The doctor that revived Meshaal described his condition as respiratory oxygen deficiency. To date, it is not clear what type of agent was used by the Mossad against Meshaal, but a few facts are known. Israel employed a biological/chemical agent with a respiratory effect. Israel possessed the antidote to its lethal agent. Benjamin Netanyahu as Israeli PM, authorised the botched assassination and the usage of a biological/chemical weapon.

Israel is not a signatory to the Biological Weapons Convention. It is generally assumed that the Israel Institute for Biological Research in Ness Ziona develops vaccines and antidotes for chemical and biological warfare. In 2012 Haaretz wrote of the Ness Ziona laboratory that it's an "institution that very rarely finds itself in the news, and when it does, it's usually because of some controversy or other. According to Israeli sources, the institute develops pharmaceuticals, vaccinations, treatments and antibodies to protect Israelis from chemical (gas) or biological weapons. That's along with its civilian research projects." Haaretz continues, "according to foreign reports, it also develops chemical and biological weapons. One of these reports said institute scientists had developed the poison that was meant to have eliminated Hamas political leader Khaled Meshaal in the botched Mossad attack against him in Amman in 1997."

Any detectives who examine the Ness Ziona Lab will have to figure out how the Israeli institute is already so advanced in the development of a Covid-19 vaccine. According to the Israeli press, a novel corona virus vaccine is already being tested at the institute.

Ness Ziona is not alone at the front of the Corona vaccine race. Migal, another Israeli company, announced at the end of February that it was almost ready with a vaccine.

Detectives should ascertain whether Migal, like other laboratories around the world, is a safe environment and that it wasn't in the Galilee laboratory that a tiny but vicious virus escaped its guardians.

Foreign Policy Magazine revealed three weeks ago that the Corona virus' early appearance in Iran that sickened government and military leaders caused some Iranian officials to believe that the Coronavirus was part of an 'American-Zionist biofare military campaign' against their republic and its leaders.

I am not in any position to produce incriminating evidence against any person, institution or a state, it isn't my job nor it is my wish to do so. I am a writer not a detective. Yet I maintain that evaluating the corona crisis as a crime may make those who plan to survive the pandemic feel a little safer in a world that long ago has lost its way.
