Study, After Study, After Study, COVID-19 Mortality Rate is...

Similar to 'Seasonal Flu'

- So Why the Insanity? -

from [HumansAreFree](http://HumansAreFree.com) Website

Dr. John Ioannidis

announces the results of his serology study

in Santa Clara, California

Every single antibodies studies so far has implied the same thing:

- The true number of infected is far, far higher than those captured by PCR tests.
- The infection fatality rate is somewhere between 0.5 and 0.1 percent.

How many more studies do we need before we understand that the fatality rate for Covid-19 is about **the same as the seasonal influenza**?

HEALTH

7,272,787
Communicable disease deaths [this year](#) [-]

273,272
Seasonal flu deaths [this year](#) [-]

Quick facts:

- Every year an estimated 290,000 to 650,000 people die in the world due to complications from seasonal influenza (flu) viruses.
- This figure corresponds to 795 to 1,781 deaths per day due to the seasonal flu.

Sources and info:

- [Seasonal flu death estimate increases worldwide](#) - CDC
- [Up to 650 000 people die of respiratory diseases linked to seasonal flu each year](#) - World Health Organization (WHO)

Source

These are the studies that prove this:

- the Gangelt study (Germany)
- the Stanford University study in Santa Clara (USA)
- the LA County study (USA)
- the Lancet Infectious Disease study (UK)
- the University of Miami study for the Miami-Dade county (USA)
- the New York state testing (USA)
- the Mail said a similar fatality rate - 0.19% - was found in a study of residents in Helsinki (Finland)
- the Antibodies Study in Slovenia... they all say the same thing (Slovenia)
- the CDC (USA) also confirmed a very low mortality rate, of just 0.26%

And there hasn't been a single antibodies study to contradict them...
